CSA Medical Supports Esophageal Cancer Awareness Month

Lexington, MA – April 2 – April is Esophageal Cancer Awareness month. CSA Medical is committed to raising awareness of Esophageal Cancer and the importance of early diagnosis and treatment.

CSA Medical supports the efforts of the Esophageal Cancer Action Network’s (ECAN) mission to save lives by increasing awareness of the link between heartburn and cancer, promoting early detection and treatment, and supporting medical innovation to prevent, detect, treat and cure Esophageal Cancer. To learn more about esophageal cancer, visit www.ecan.org

CSA Medical’s truFreeze® Spray Cryotherapy System is the only minimally invasive ablation methodology with FDA clearance for ablation of the full range of esophageal disease, including cancer of the esophagus and Barrett’s esophagus with low and/or high grade dysplasia. The truFreeze system is currently being utilized in a prospective, open label, non-controlled single arm, multi-center study: “*truFreeze palliative esophageal cancer study*”. The primary objective is to study the effects of the truFreeze Spray **Cryotherapy** System in a population of subjects who have been diagnosed with persistent local esophageal cancer and who are not surgical candidates or have completed or declined systemic therapy. For more information, visit <https://clinicaltrials.gov/NCT03243734>

About Esophageal Cancer

Esophageal cancer is among the fastest growing and deadliest cancers in the US. It is estimated that estimated 17,290 people will be diagnosed with esophageal cancer in 2018, and an estimated 15,850 patients will die from esophageal cancer¹. The survival rate for patients with all stages of esophageal cancer is 20%, with survival rates for patients diagnosed at an early stage being much higher making early detection critical for a successful outcome. Risk factors include gastroesophageal reflux disease (GERD), chronic heartburn, obesity, poor nutrition, tobacco use and Barrett’s esophagus. Screening and treatment for Barrett’s esophagus, which can lead to esophageal cancer, is essential.

About CSA Medical

CSA Medical, Inc. develops and manufactures a proprietary interventional spray cryotherapy

technology platform utilizing unique properties of liquid nitrogen spray delivered by a software driven device with specialty catheters that enable delivery of spray cryogen inside the body to flash freeze and destroy unwanted tissue allowing for a rejuvenative pattern of healing.

To learn more about our technology, visit www.csamedical.com.

truFreeze® is a registered trademark of CSA Medical, Inc.
